

There is no friends list or contact list access from chat or online friends list. Have to leave chat to go to profile and start message from there

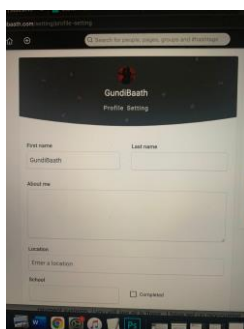

Same issue here also and friends option below not showing it either

Gundibaath

- These are screenshots of the chat windows on the phone. There is no access to friends list from here or contact list from these screens at all. Have to go to Profiles of the people individually to start chat. **This should be completely user friendly on a mobile, easy access because all people use chats mostly on phones.**
- Also when video or audio calling, **get a error message showing when call placed saying not working on this browser, don't want that. Right now audio video call work on chrome only. Connection time for call? Is that normal?**
- **Main thing after above is no charges till set given launch free trial over date so payment charge start from date Feb 15, unless u finish work sooner. After that day anyone who signs up will get only 1 week free**
- There is maybe 1 or 2 places colour has to be changed Where Gundibaath is written. Black not that printed look. All else looks ok!

- 4 packages are already there with pricing only. Issue is want to make **Chat package -STAR & HOT Audio/video- ULTIMA & VIP**

STAR is monthly chat only & **HOT** is yearly for STAR package

ULTIMA is audio/video also **VIP** is yearly payment for ULTIMA package

- **GUNDIBAATH, PAYPAL** is already working and works automatically with packages chosen from the dashboard already created. There is option to make **Stripe account** which is already integrated into the website. There are other options already there AS WELL. Only accounts have to be made to add. **Don't need to integrate new payment systems.** (you will see all is there, I have set up reoccurring payment monthly and it charged 3 months in a row. So that part is working)

-client info security

-ensure password reset email is working well or sign up confirmation email is working
